

Addressing Issues that Matter in Real Estate

We understand the unique challenges of the real estate industry and have built specialized expertise within each sector to address them. And, recognizing that needs change over time, our tailored approach to our client's real estate portfolio and development operations keeps pace.

Cert Tracking & Risk Transfer

Typically, a significant portion of a real estate organization's risk is transferred to third parties. This could be from your subcontractors, outside ownership or management groups, your day-to-day vendors, or your tenants. Are your liabilities accurately transferred to the right parties?

Directors & Officers Liability

Most real estate organizational charts will make insurance underwriters' heads spin. But not us. Is your leadership team properly covered?

Environment, Social and Governance (ESG)

Companies are acknowledging that ESG is a driver for success. What does it mean and how can you incorporate it into your business operations?

Smart Technology & Big Data

Cyber risks increase the more your firm accumulates personal data for employees or tenants, whether it is social security numbers, addresses or credit card information or adds smart technology to your properties. How resilient is your firm and do you have the right controls in place?

Benchmarking & Analytics/ CAT Modeling

Premium benchmarking and targeted analytics help you make informed decisions and support your acquisition strategy. CAT Modeling determines how exposed your portfolio is to wind, hail, flood or fire. Will you be prepared when disaster strikes?

Acquisitions Strategy

As a potential buyer of a property, due diligence is a comprehensive, complex, and critical stage in any real estate acquisition. What is included in your checklist?
